

Make No Mistakes

When it comes to her job, precision is key, and being precise is what Pan Jiahui does best. She tells us why no margin of error is tolerable and what happens when things do not always go her way.

Jiahui is very clear about the expectations of her role. “I design a required product, analyse its structure, thermal integrity and perform quality check on its fabrication. They must be highly accurate.”

This might sound stressful to many, but it keeps Jiahui going. She finds excitement in the fact that she is able to build something from scratch. It is also important that her work plays a role in advancing our nation’s defence technologies. “It makes me appreciate the significance of my skills and work better.”

This explains the high expectations Jiahui sets for herself. A focused individual, she manages multiple deadlines, prioritises her demanding schedule and picks up on new software programmes fast. It’s all about conquering the challenges in her stride.

Stumping moments, however, does not fail to strike. This is when Jiahui’s positive attitude makes the real difference. “Failure is part and parcel of R&D. When in need, simply seek help!” Acknowledging her colleagues and supervisors who have been very supportive, she has been able to rise to the occasion and pursue the perfection she is seeking for.

“ Failure is part and parcel of R&D. When in need, simply seek help! ”
